

## AWARENESS CAMPAIGN FOR A MODERATE USE OF RESOURCES

Everyone's commitment to the wise use of energy resources is essential to change the fate of the planet.

The ecological transition has become a global necessity today. It is no longer possible to ignore or underestimate factors such as energy waste, pollution or climate change. Everyone can and must contribute to protecting the environment, even by changing small daily habits and reducing consumption or making their home more sustainable.

The news reports remind us every day that we must pay attention to the use of electricity, gas, and water, increasingly limited resources.

C.R. Technology Systems is sensitive to the fight against pollution and wants to be in the frontline in the defense of the environment and in developing increasingly sustainable solutions with a low impact.

In practice, the company implements some measures aimed at maintaining faith with the values of social and environmental responsibility.

- ✓ Purchase of lights with switching on and off automatization and high energy class devices, with a low environmental impact, also in the Production hub, in Zanica
- ✓ Plastic-free project, providing 2 dispensers of still and sparkling water, and choosing products in glass, paper or biodegradable plastic
- ✓ Enhancement of the maintenance of the photovoltaic system
- ✓ Possibility for employees to move to the nearest office
- ✓ Support for employees with the provision of meal vouchers to cope with price increases due to the energy crisis

Below is a list of good practices to adopt both inside and outside the company. Everyone is invited to follow these suggestions and reflect on the importance that their contribution can give to the planet.

## AVOID WASTE IN THE COMPANY

- Turn off the lights, electrical devices, air-conditioning, and heating system, when you do not use them
- Unplug the sockets every day before leaving your desk
- Use only the necessary water, without opening the sink to its maximum power
- Separate collection is important: use the special containers and separate each component before disposing of your waste
- Do not print paper when not necessary

## SAVE ON MOBILITY

- Avoid using the car every time possible, choosing shorter travels on foot or by other means of transport (autobus, metropolitan, etc...)
- Opt for Carpooling: if possible, arrange with a friend or colleague to go to work using only one car
- Use a gentle driving style, avoiding sudden acceleration and braking in order to save fuel
- Do not overload the vehicle with unnecessary weights
- Ensure the tire pressure is the one recommended by the manufacturer: a slight loss of pressure causes greater tire and fuel consumption

## SAVE ENERGY AT HOME

- Do not keep lamps on unnecessarily, especially during the day and take advantage of sunlight
- If you do not use electrical devices for long time, turn them off (tv, radio, computer, etc...) with the main switch, avoiding the stand-by function
- Use washing machine, dryer and dishwasher only when fully loaded
- Where possible, replace the bulbs with LED ones
- Install, where possible, systems and appliances for monitoring electricity/gas/water consumption
- Prefer the shower over the bath, everytime you can save up to 150 L of water
